

**Want an Easy Fix to Save Water?**

**FLIP YOUR  
FLAPPER**

# FLIP YOUR FLAPPER

Your tank will thank you!

Did you know that the rubber flapper in your toilet tank should be replaced at least **every five years**? If you haven't replaced the flapper in a long time, your toilet could be silently leaking thousands of gallons of water each year. For just a few dollars, this easy do-it-yourself task can save water and lower your utility bill.

**Pro tip:** Before you buy a new flapper, take a photo inside your tank to make sure you buy the right one.
